

CAREER PROFILE

My name is Dave Smith and I've been a software developer for 17+ years. Over those years I've helped different organizations refine requirements, design and code solutions to enable or support the business. My goal has been to produce high quality software where the code is easy to read, easy to change and easy to deploy. I love working in a team environment where we can share ideas and collectively work on a solution. I believe we do our best work when work when we work together. I am excited at the prospect of working at a product driven company.

EXPERIENCES

Senior Software Developer

Robert W. Baird, Milwaukee, WI

2008 - Present

Baird is a Milwaukee, WI based financial services firm. As a senior software developer Software developer my role was a hybrid of developing new projects while also supporting existing systems for the Equities Trading business.

My proudest acheviement was helping the development organization shift to using CI/CD practices. This enabled all teams to ship features easily and promoted a culture to ship early and often.

- Worked with product owner to turn feature requests into technical requirements
- Shipped features in a client facing Angular app and back end APIs using C#, Typescript, and SQL
- Implemented batch and real-time data integrations using C# and SQL
- Led the migration to Azure DevOps from GoCD, also acted as the subject matter expert on CI/CD practices
- Led the organization from an on-prem delivery model to a cloud-first hybrid model in Azure
- Mentored and trained new team members and interns teaching fundamental development skills through pair programming
- Facilitated weekly code kata for team members
- Presented new technology to the organization using blogs and formal presentations

Software Engineer

Eagle Technology, Mequon, WI

2007 - 2008

A software product company focused on offering asset mangement and work tracking software in the facilities and manufacturing sector. As a software engineer my team was tasked with rewriting the legacy desktop software with a web based version using ASP.NET.

- Shipped new features working with team members
- Migrated customer databases from previous version to current
- Participated in team code reviews to promote excellent development practices
